

On-Call Architecture, Engineering, and Construction Management Services | Southeastern United States

Axis Infrastructure is contracted with McDonald's for on-call architecture, engineering and construction management services for its \$4B major remodel program in the Southeastern and Midwestern United States. Projects involve remodeling building exteriors by neutralizing the signature mansard, branding, dining and kitchen additions, and installing a side-by-side drive-thru. The interior remodels include kitchen modifications, complete removal and replacement of interior finishes, and décor.

ADA is a significant element of every design and all sites were brought into compliance, including but not limited to, parking, restaurant ingress/egress, seating, counters, restrooms and crew room facilities.

Since 2017, Axis has completed over 500 major remodel projects. Projects included coordination with multiple vendors on décor, kitchen equipment, and technology applications (software and hardware upgrades). Projects will be ongoing until 2022.

Role of Firm:

Architecture | Engineering | ADA Compliance | Legal Approvals
Construction Coordination and Management | Project Closeout

Preconstruction Design Services:

Due-Diligence (Site Investigation Reports) | Programming
Concept Design | Pricing | Construction Documents
Permit Submittals and Approvals
